Frequently Asked Questions

What is Bot Detection?

Which bot detection tools does Pixelscan use?

Can I use this tool to check if my browser profile or scraping setup looks like a bot?

Yes. Pixelscan is designed for automation users who need to test how their setup will be seen by detection systems. You can use it to check:

- Antidetect browser profiles (e.g., Multilogin, GoLogin)
- Scraping frameworks (e.g., Puppeteer, Playwright, Selenium)

- Proxy-based configurations for traffic rotation or IP masking

Pixelscan analyzes fingerprint signals like cookies, WebGL, and audio context to reveal whether your setup might be flagged as a bot by target platforms.

How can I run a bot test online?

Just open Pixelscan in your browser and run the test—no installation needed. You'll get instant feedback on how your setup is classified, along with a detailed report to help you understand and improve your environment.
